

# ecological sanitation meets architecture

Markus Lechner

Elke Müllegger

# The Idea behind

# Background

- **Seminar „Cycle oriented wastewater systems – planning and design of ecologically oriented sanitation systems” held in Vienna in September 2004**
- **Personal experiences during the last years**
- **Intensive discussions**

# Aim

- **Linking architects and sanitation planners:**
  - to extract deficits in EcoSan planning as seen from the architectural point of view
  - to use opportunities for the implementation of EcoSan Concepts by linking sanitation planning to architectural planning

# The link to EcoSan

1. Make Water and EcoSanitation Concepts part of architectural planning

# MIVA Office building, Austria

## **2. Make use of extensive planning experience of architects**

# Kalungu Girls Secondary School, Uganda

### **3. Complement the utilitaristic approach in Ecosanitation planning**

# Balit Hospital, Philippines

# Conclusions

- **linking EcoSan planning to architectural planning in order to create mutual synergies can be on possibility to further spread EcoSan concepts. If the fact is accepted that the ideas behind EcoSan concepts – closing cycles – are not every bodies prime interests the establishment of such a link can help to get a step forward in terms of numbers of users of EcoSan solutions.**

## The best toilet in the world.....
